Engineering Director
Radio Station WMS
Williams College
Williamstown, Massachusetts

Dear Sir:

I was very glad to hear from you, and I am sorry I can't give you much information, but we, being girls, know little about the workings of our board. We have an electrical contractor who does all our work for us.

The experience we have had concerning the problems you listed is as follows:

1. Installation would not adversely affect TV sets, radios, timing and heating controls, or electronic business machines.
2. Installation does not make for noisy AC power lines.
3. Other customers of the Northern Berkshire Electric Co. in the area would probably not be affected by the installation.

Our attachment to the high side of the line has not been completed as yet, and thus I can not say very much about it. If you would care to write our contractor,

A. D. King
65 King Street
Northampton, Massachusetts,

perhaps he could help you. Otherwise, Amherst, WAMF, could answer any further questions.

I am sorry I am unable to give you more specific information, but I hope this helps.

Sincerely yours,

Nancy Godfrey,
Station Manager

Dear Sir:

I am very glad to hear that you are
giving for such information, but as I have
the majority of the board, I have no objection
to all your work.

Your experience in this has been very
invaluable.

1. Installation should not be made until
the building and heating system is
complete.
2. Installation should be made in a room
which is not used for other purposes.
3. The building should be in a good
condition and the heating system
should be in good condition.

The attention to the installation of the
system is very important and I am
very glad to hear that you are
giving for such information.
I am very glad to hear that you are
giving for such information.
I am very glad to hear that you are
giving for such information.

I am very glad to hear that you are
giving for such information.

Very truly,
WILLIAMSON, WASHINGTON
